

INFORMATION PROCESSING SYSTEM, INFORMATION PROCESSING
METHOD, AND PROGRAM

Abstract

An object is to provide a user with appropriate information about a unit area price and liquidity of a property in a predetermined region. There are included an identification unit for identifying a first region that is specified by a user; an acquisition unit for acquiring first unit price information indicating a unit area price of a property in the first region, and first liquidity information indicating liquidity of the property; and a display processing unit for causing a display unit to display the first unit price information and the first liquidity information in association with each other.
