GUIDED ANALYTICS SYSTEM AND METHOD

ABSTRACT

[00157] A guided analytics system is provided. Briefly, according to an example embodiment, a guided analytics system is provided. The guided analytics system includes a memory having computer-readable instructions stored therein. The system also includes a processor configured to define a problem, identify and prepare one or more data sets associated with the problem, analyze the one or more data sets to generate one or more models, and determine, using a guided analytic workflow, one or more solutions to the problem based on the one or more models. The guided analytic workflow includes a plurality of workflow resources associated with each of a plurality of phases of the guided analytic workflow, the plurality of workflow resources being presentable to a user at one or more phases to provide at least one of analytical and statistical information related to a corresponding one of the plurality of phases and to facilitate user selection of one or more analytical techniques and associated parameters for the corresponding phase.
