

COMMUNICATION METHOD AND RELATED APPARATUS

ABSTRACT

A communication method and a related apparatus are provided. The method may be applied to a wireless local area network system that supports IEEE 802.11ax next-generation Wi-Fi protocols such as 802.11be, Wi-Fi 7, or EHT, as well as 802.11be next-generation Wi-Fi protocols, Wi-Fi 8, and other 802.11 series protocols, and may also be applied to a UWB-based wireless personal area network system and a sensing (sensing) system. The method includes: A first device receives first information from a second device on a first channel, where the first information is used to trigger the first device to send second information; the first device sends the second information, where the second information indicates that the first device has a transmission requirement on a second channel; and the first device communicates with a third device on the second channel, where the third device is a device associated with the first device. The solutions provided in embodiments of this application help improve communication performance.
