ABSTRACT

INFORMATION COMMUNICATION, RECEIVING, CONFIGURATION, SENDING METHOD, RESOURCE CONFIGURATION METHOD AND DEVICE

An information communication method is applied to a network side and includes: sending a first DIC scrambled by a first RNTI to a terminal, the first DCI is used to indicate whether the control information of a Multicast service and/or broadcast service is changed or related information is changed; or, sending a second DCI scrambled by a second RNTI; the second DCI is used to indicate whether the control information of a Multicast service and/or broadcast service set is changed or related information is changed; the control information includes configuration information of the Multicast service and/or broadcast service.
