(54) **Title: BREATH SAMPLING DEVICE**

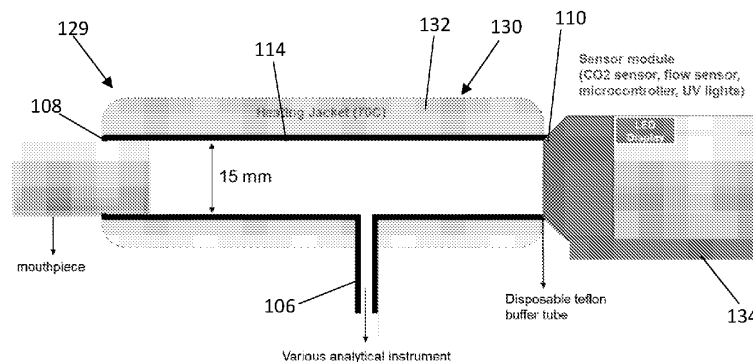

Figure 2

- (57) **Abstract:** Disclosed is a breath sampling device comprising a buffer tube, sensor module and breath sampling port. The buffer tube has a proximal end into which a user exhales and a distal end opposite the proximal end, the sensor module is at the distal end and used for measuring parameters of a breath exhaled by the user into the buffer tube, and the breath sampling port is disposed between the proximal end and distal end. The user exhales into the distal end and a portion of the exhaled breath can be diverted into the sampling port substantially without contacting the sensor module.
