ABSTRACT

KNOTLESS SUTURE, AND KIT CONTAINING SAME

The present invention relates to a suture which is firmly maintained and fixed to an operational site to stably sustain suturing or lifting effects for a long time. More specifically, the present invention provides a suture having a conic or pyramidal shape with a cut top, wherein a suture support comprising a communication hole penetrating the both ends is provided at one end. The suture support can have one or more portions which are cut vertically from a lower end at a lower end portion having a larger diameter between the both ends, or a part of a lower end can be removed so as to form one or more gaps formed from the end at a wall of the end portion.
