

Abstract

METHOD FOR PRODUCING POLYMER

The method for producing a polymer of the present invention comprises step (1) of continuously feeding a monomer comprising a conjugated diene compound and/or an aromatic vinyl compound to a polymerization tank, and step (2) of continuously feeding a solution comprising an organolithium compound to the polymerization tank, wherein the linear velocity of the solution comprising an organolithium compound at an opening of a feed port in step (2) is 0.1 to 5 m/sec.
