

ABSTRACT

INFORMATION PROVIDING SYSTEM AND INFORMATION PROVIDING
METHOD

5

An information providing system and an information providing method with improved usability are provided.

An information providing system includes: a display device 12 disposed in an information provision target area, the display device 12 having a display function configured to display information including an operating unit to a user in the information provision target area and an operating function configured to receive an input from the user through the operating unit; a three-dimensional sensor 14 configured to acquire three-dimensional shape data on surroundings, including the user, of the display device 12; a user attribute determination unit 16 configured to determine an attribute of the user based on the acquired three-dimensional shape data; a positional relation acquisition unit 18 configured to obtain a positional relation between the user and the display device 12 based on the acquired three-dimensional shape data; and a controller 20 configured to control the display device 12 to display the operating unit at a position corresponding to the positional relation and the attribute of the user and display information content corresponding to the positional relation and the attribute of the user.
