

Description

Using a projector glass as an interactive, writing and reading board. The board will be illuminated by the projector when using as a writing board. Image can be projected onto the glass via the projector connected to a laptop/computer. The trainer can interact with the image by using an interactive projector. The resultant image will be capture by a camera place in front of the projector glass. The image will be laterally inverted and display onto another display equipment. The camera maybe turned off; the projector glass can be used as reading display for the trainer while the second display to be used as a display for learners. The trainer can read off the displayed materials without his/her back facing the learners.

Claim

- (1) The use of a projector glass as a board for writing/display or as a teaching tool
- (2) Use projector to convert/transform a projector glass into a white board; illuminating it with white light from the projector
