(54) Title: **DIVIDER PANEL FOR STACKED CANS**

(57) Abstract

There is provided a paperboard sheet (10) for separating two layers of cans (12). The sheet (10) provides a number of can receiving locations (13) each having inner and outer openings each defined by a series of cuts. The cuts define first, second and third covering portions (20, 21, 22) which are joined by tabs (25) which allow the covering portions to move into different planes relative to each other. In use the third portion (22) rests on the top rim of a can, the second portion (21) sits between the top rim and the opening ring of the can and the first portion (20) covers the opening ring. This enables an upper can to rest with the lower can without metal-to-metal contact.
