ABSTRACT OF THE DISCLOSURE

TITLE OF INVENTION: **DATA BROADCAST RECEIVING APPARATUS**

The invention relates to a data broadcast receiving apparatus used in a system combined with other transmission line such as telephone circuit, by receiving television broadcast having data broadcast signal such as teletext signal superposed on television broadcast signal, in which a first auxiliary information signal contained in the data broadcast signal and a second auxiliary information signal from other transmission line are extracted, control procedure is created on the basis of the first and second auxiliary information signals, and the data broadcast signal and two pieces of main information from other transmission line are processed efficiently according to the purpose.
