

ABSTRACT

- 5 A completion/intervention riser system for providing a conduit for communicating fluids and wireline tools between a surface vessel and a subsea well having a tubing hanger located therein, the tubing hanger including a production bore and an annulus bore, wherein wireline tools may be lowered through a riser bore to either the tubing hanger production
- 10 bore or the tubing hanger annulus bore through operation of a bore selector, and fluids may be produced from the well to the surface vessel through the production bore and the riser bore by sealing off the annulus bore.
