What is Claimed is:

1. A medical kit comprising: an implant agent, wherein the implant agent comprises:

hyaluronic acid;

microparticles, wherein the microparticles comprise a cross-linked material having a glass transition temperature of at least 120 degrees C., wherein the microparticles are suspended in a solution comprising the hyaluronic acid, and wherein the implant agent has a viscosity between 50,000 and 200,000 centipoise; and

a syringe containing the implant agent.

2. The medical kit of Claim 1, wherein the hyaluronic acid comprises cross linked hyaluronic acid.

3. The medical kit of Claim 1, wherein the microparticles comprise PMMA.

4. The medical kit of Claim 3, wherein the PMMA microparticles have an average diameter between 15 microns to 250 microns.

5. The medical kit of Claim 3, wherein the PMMA microparticles further comprises linear PMMA.

6. The medical kit of Claim 1, wherein the syringe includes a needle ranging in size from between 18-gauge to 25-gauge.

7. The medical kit of Claim 1, wherein the concentration of hyaluronic acid in the solution is between 1.0% and 3.0%.

8. The medical kit of Claim 7, wherein the concentration of hyaluronic acid in the solution is between 1.6% and 2.4%.

9. The medical kit of Claim 1, wherein the molecular weight of hyaluronic acid in the implant agent is greater than 1.6 M Da.

10. The medical kit of Claim 1, wherein the molecular weight of hyaluronic acid in the implant agent is greater than 2.8 M Da.

11. The medical kit of Claim 1, wherein the concentration of cross-linked material in the implant agent is between 25% and 50%.

12. The medical kit of Claim 1, wherein the concentration of cross-linked material in the implant agent is between 38% and 48%.
