

METHOD FOR USING A FOLD AND WRAP PACKAGE FOR CATAMENIAL PADS
PROVIDING CONVENIENT DISPOSAL

ABSTRACT

An improved fold and wrap package providing containment of a catamenial pad prior to its use and for conveniently disposing of a soiled catamenial pad. The fold and wrap package comprises a wrapper comprising a single strip of material having a flap panel, a central panel, and an end panel. The package is initially configured to have a pouch and a flap. The pouch is formed by folding the end panel back upon the central panel and frangibly bonding the end panel to the central panel at the longitudinal edges so that the end panel may be easily peeled away from the central panel to provide convenient disposal of a soiled pad. The pouch is designed so that an unused pad may be disposed within the pouch with the flap being positioned over the mouth of the pouch.
