ley Ave, San Mateo, CA 94403 (US).

(54) Title: GAMEPLAY AREA SYSTEM

FIG. 1

(57) Abstract: In some examples, a gameplay area system comprises a playmat including a middle section. The playmat may comprise a first side section rotatably coupled to the middle section enabling the first side section to fold over the middle section, the first side section comprising at least one closing magnet. According to some examples, the playmat comprises a second side section rotatably coupled to the middle section opposite the first side section, enabling the second side section to fold over the middle section and the first side section. The second side section may comprise at least one mat magnet. The at least one mat magnet may be configured to magnetically couple to the at least one closing magnet while the first side section is folded over the middle section and while the second side section is folded over the middle section and the first side section.
