

**APPARATUS FOR REMOTELY OPERATING CRANE APPARATUS, CRANE
APPARATUS, AND SYSTEM FOR REMOTELY OPERATING CRANE APPARATUS**

ABSTRACT OF THE DISCLOSURE

There is provided a remote-operating apparatus for remotely operating a plurality of crane apparatuses performing loading and unloading in a container yard. The remote-operating apparatus includes a reception unit for receiving video signals showing loading and unloading states transmitted from the plurality of crane apparatuses; and a monitor for displaying an image based on a received video signal. The identification information of the crane apparatus that has sent the received video signal is displayed in part of the image displayed on the monitor.
