(54) Title: TASK PROCESSING METHOD, APPARATUS, AND SYSTEM

(57) Abstract: The present disclosure discloses task processing methods, apparatus, and systems. One exemplary task processing method comprises: acquiring a target task to be deployed to a target device; generating a confirmation signal according to the target task, the confirmation signal including task content of the target task; and sending the confirmation signal to the target device when a heartbeat request from the target device is received. The target device can execute the target task according to the task content. Consistent with the disclosed embodiments, the target device can be an edge device close to the data source and executing the target task can include running cloud computing logic and applications on the edge device.
