ABSTRACT

METHOD AND SYSTEM FOR PROVIDING PERFORMANCE ASSESSMENT OF TERMINAL DEVICES

A method for providing performance assessment of terminal devices is provided. A user initiates, by way of a service application that runs on a user device of the user, a first request for obtaining risk scores or connectivity scores of the terminal devices. The first request may include terminal identifiers of specific terminal devices or information pertaining to a specific geographical area. The user device communicates the first request to a server. The server determines the risk scores or the connectivity scores based on the first request. The server transmits, to the user device, a first response that includes the risk scores or the connectivity scores. The user device displays the risk scores or the connectivity scores to the user based on the first response, thereby providing the performance assessment of the terminal devices.
