

THREE-DIMENSIONAL MASSIVE MODEL VISUALIZATION DATABASE SYSTEM

ABSTRACT

5 A method and system for managing three-dimensional massive
model visualization data sets. The method comprises compiling a
vehicle list of vehicles for which the three-dimensional massive
model visualization data sets are to be built. The method
automatically builds the three-dimensional massive model
10 visualization data sets for vehicles in the vehicle list using a
computer system. The method stores the three-dimensional
massive model visualization data sets in a group of
repositories. The method distributes the three-dimensional
massive model visualization data sets for displaying massive
15 model visualizations for the vehicles using the three-
dimensional massive model visualization data sets on client
devices. The method may selectively update a three-dimensional
massive model visualization data set in the three-dimensional
massive model visualization data sets when the three-dimensional
20 massive model visualization data set is out-of-date.
