(54) Title: INHALER

(57) Abstract

Disposable inhaler comprising a tubular housing forming an air flow path being open at both ends, one end forming an air inlet and one end forming an air outlet, said housing comprising a compartment for storing a pharmaceutically active substance to be inhaled, said compartment being placed in the air flow path close to the air inlet, wherein the powder compartment is formed as a cavity or indent in a plate and placed in the housing in the air flow path. According to the invention there is also provided a method of manufacturing the inhaler as well as a use of the inhaler.
