

ABSTRACT

The invention relates to a feedback mode indication method and device, a feedback mode determination method and device and a storage medium, and belongs to the technical field of communication. The A method for indicating a feedback mode comprises the steps that a first device obtains the configuration information, the configuration information being used for indicating whether the first device supports an optional function of hybrid automatic repeat request (HARQ) feedback; the first device sends sidelink control information (SCI)the direct connection control information to a second device based on the configuration information, wherein the SCIdirect connection control information comprises a first type of SCIdirect connection control information and a second type of SCIdirect connection control information, and one of the first type of SCIdirect connection control information and the second type of SCIdirect connection control information comprises a first field, the first field is used for indicating an HARQ feedback mode of multicast communication data transmission. According to the invention, how to use the direct connection control information to indicate the HARQ feedback mode of multicast communication is determined based on whether the first equipment supports the optional function of the HARQ, and the application is flexible.
