(54) Title: METHOD AND APPARATUS FOR FORMING A HONEYCOMB-SHAPED CORE FOR HONEYCOMB PANELS		
(57) Abstract Method for forming a honeycomb-shaped core, which is suitable for being included in a honeycomb panel for example, wherein webs or plates of deformable material, in particular cellulose material such as, for example, paper or cardboard, are provided with continuously or otherwise extending glue strips which for every two plates to be mounted onto each another, said plates possibly originating from webs, are disposed in a laterally regularly mutually staggered manner on faces thereof having the same orientation and wherein the plates are pressed onto each other in order to allow them to adhere to each other locally, in which the glue strips are applied with the help of glue spout nozzles.
