(54) Title: METHOD OF PROCESSING A SIGNAL IN A HEARING AID, A METHOD OF FITTING A HEARING AID AND A HEARING AID

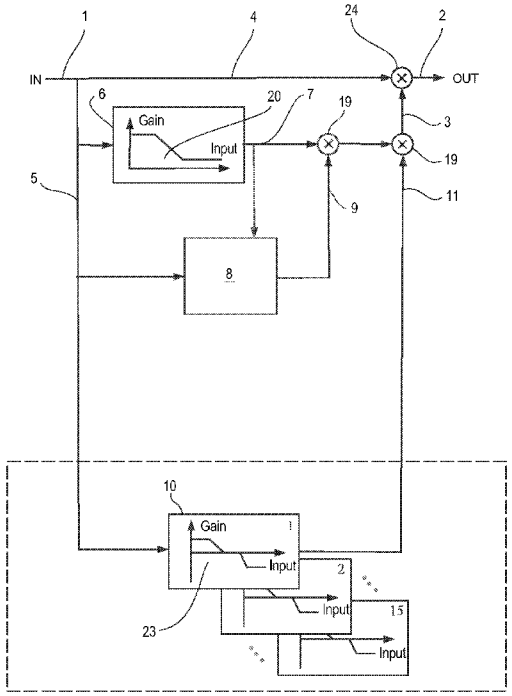

Fig. 1

(57) Abstract: The present invention relates in a first aspect to a method of processing a signal in a hearing aid, in a second aspect to a method of fitting a hearing aid to a hearing aid user, and in a third aspect to a hearing aid. The method according to the first aspect of the invention comprises deriving a control signal (3) from an input signal (1). The process of deriving the control signal comprises a standard processing (6) so as to provide a standard processed control signal component (7) 10 based on a standard compressor characteristic, and an individualized processing (10) so as to provide an individualized processed control signal component (11) based on an individualized compressor characteristic. The standard and individualized processed control signal components are multiplied together to form the control signal.
