(54) **Title:** SYSTEM AND METHOD FOR FACILITATING DELIVERY OF PATIENT-CARE

FIG. 10

(57) **Abstract:** A computer-implemented method for facilitating delivery of patient-care in adherence with a standard of care clinical protocol is described. The method includes monitoring, by a computing device, patient information indicative of a clinical condition, based on a clinical protocol that comprises patient-care instructions that must be completed within a time period. The method further includes providing, by the computing device, the patient-care instructions to a user based on a result of the monitoring. The method also includes determining, by the computing device, adherence to the clinical protocol based on a result of at least one of the providing patient care instructions and the patient information; and for a determination that the clinical protocol has not been adhered to, providing a recommended action request that calibrates the patient care instructions in compliance with the clinical protocol.
