CLAIMS

1. A packaging bag formed by a multifold film, the multifold film comprising two stacked multilayers, wherein the packaging bag has a longitudinal seal and a transverse seal,

wherein the longitudinal seal seals a region in which both edge portions of the multifold film are stacked,

wherein the transverse seal seals the multifold film in a direction substantially orthogonal to the longitudinal seal,

wherein the packaging bag is formed using envelope sealing,

wherein the multifold film has an inner multilayer film and an outer multilayer film,

wherein the multifold film comprises two stacked multilayer films formed by flattening a tubular multilayer film,

wherein each of the inner multilayer film and the outer multilayer film is a multilayer film,

wherein the inner multilayer film and the outer multilayer film contains colorant in only a layer to be an innermost layer of the tubular multilayer.

1. The packaging bag of Claim 1,

wherein the colorant is an inorganic pigment.
