(54) **Title**: REPOSITIONING A VALUE AXIS

FIG. 3A

(57) **Abstract**: Trading screen which allows a market value indicator to go out of view without triggering a command to reposition a value axis. The value axis may be repositioned to bring the market value indicator back in view when the market value indicator satisfies a threshold condition. The threshold condition is defined such that it is possible for the market value indicator to go out of view and not trigger a command to reposition the value axis. Various embodiments automatically reposition the value axis in a way that can provide the user with more overall control of the trading screen than previous trading screens. Further, the user may gain increased confidence in using the trading display, particularly with respect to single action order entry, because there is less risk of the value changing on the display during order entry.
