

ABSTRACT

FIRE-RESISTANT WOOD MEMBER

5 Provided is a fire-resistant wood member having a
smaller cross section.

 A wood member 100 has fire resistance and includes a
core material 10 made of a wood material that supports a
load. A shape of the cross section of the core material 10
10 is a polygon. Corners 14 of the polygon are chamfered off,
and the chamfering dimension is within a range of 10 to 50
mm.
