

Abstract

A sealable resin sheet 1 is a resin sheet for sealing an element 21. The sealable resin sheet 1 includes a matrix 4 formed from thermosetting resin, first domains 5 formed from a non-layered filler and dispersed in the matrix, and second domains 6 formed from a layered filler and dispersed in the matrix. The sealable resin sheet 1 has a codispersion region 3 in which the second domains 6 are located among the first domains 5.
