

ABSTRACT

Embodiments of the present disclosure disclose a session method and apparatus, an electronic device, and a storage medium. The method is applied to a client of a first user, and comprises: receiving, on a session interface, a preset message transmitted by a second user, the preset message being configured to trigger an entrance for setting a preset function; in response to the fact that the entrance for setting the preset function is triggered, displaying a region for setting the preset function; and in response to a setting operation for a preset function in the region for setting the preset function, setting the preset function of a client of a first user.
