

GARMENT INCORPORATING A NON DESTRUCTIVE CONTROL SYSTEM

ABSTRACT

The invention relates to a garment of vest type (1) incorporating a non-destructive control system comprising, as constituent elements, an electronic measurement device (26) able to be connected to a measurement sensor, and linked to an electronic card (20) itself linked to an electrical
5 power supply source (21) and to a viewing and control screen (27), and cables for electrically and electronically linking said constituent elements to one another.
