(54) Title: SYSTEM AND METHOD FOR SELECTIVELY IMPLEMENTING LAYOUT CONFIGURATIONS AMONGST OBJECT GROUPINGS OF A DESIGN UNDER EDIT

FIG. 2C

(57) Abstract: A computing system operates to associate a layout logic with a plurality of object that are rendered on a canvas of a user device, where the plurality of objects include a parent object and multiple child objects contained within the parent object. The multiple child objects can be arranged to have a first collective span in a first axial direction and a second collective span in a second axial direction. In response to a first input, the computer system automatically implements the layout logic by (i) changing a dimension of the parent object in each of the first axial direction and second axial direction, and (ii) rearranging the multiple child objects within the parent object to change the first collective span and the second collective span.
