(54) Title: A TRAINING DEVICE FOR BALL GAMES

(57) Abstract: A training device (1) for ball games comprises a first ring member (3) arranged in a first plane and a second ring member (2) arranged in a second plane substantially parallel to the first plane. A number of bars (4, 5, 6, 7) connected the first and second ring members to each other, so that a number of openings are defined between the ring members and the bars. The device provides openings defined by the ring members and the bars in all directions when the device is placed with one of the ring members resting on the ground. Thus it is possible for several persons to train at the same time since each person is allowed to use a respective one of the openings. The opening in the upper ring can be used by persons training to drop the ball through a horizontal opening.
