(54) Title: SECURITY AND DEPLOYMENT ASSEMBLY

(57) Abstract

A locking assembly for a firearm, having a support member (18) with an action locking arm (26) and an action locking lug (28) extending from the support member (18). The action locking lug (28) and arm are received in the firing chamber (38) of a pistol (36), with the muzzle end (52) of the pistol is rested on the retainer arm (30). A recoil spring (68) in the pistol generates a pincer action between the action locking arm (26) and the retainer arm (30) to securely maintain the pistol (36) in the locking assembly. The locking assembly may be incorporated in a holster (10), or it may be more stationary, such as by mounting on the dashboard of a police squad car.
