

**FIGURE 1**

A few tips on getting the best fit for your feet ...

MY SHOES FEEL:

JUST RIGHT

What are you waiting for?
You're ready to take on the world!

A BIT WIDE, OR MY HEEL IS SLIPPING

Add forefoot padding in the front of the shoe, underneath the standard footbed. This reduces the depth of the shoe, for a snugger fit and less heel slippage.

TOO TIGHT!

Take out the standard footbed, and replace it with the thinner footbed. This adds depth to the shoe, giving your feet more room.

IF YOU HAVE ORTHOTICS:

Take out the Bared footbed and replace it with your orthotic.

If the shoe is feeling loose, place a forefoot pad in the front of the shoe, under the orthotic.

We understand that orthotics and feet come in all shapes and sizes - that's why we have included multiple forefoot pads to help you to get the best fit.

The thicker the forefoot pad, the snugger the fit.

These options are only available in shoes that have a removable footbed. Not available with sandals, heels or shoes with an in-built footbed.
