

DESCRIPTION

DISPOSAL BOX FOR USED PLAYING CARDS

Technical Field

[0001]

The present invention relates to a disposal box for used playing cards for preventing the used playing cards from being illegally taken out in a card game and certainly discarding the used playing cards.

Background Art

[0002]

In various card games such as poker, baccarat, bridge, or blackjack, a dealer sets playing cards of one deck or a plurality of decks on a card shooter or the like, discharges the playing cards of one deck or the plurality of decks one by one from the card shooter or the like, and distributes the playing cards to game participants. In order to prevent the playing cards after being used in the game from being used for illegal purposes, the playing cards after being used in the game should be managed so as not to be lost or stolen by being temporally stored in a plastic case and be then discarded.

[0003]

For example, International Publication No. 2013/172038 discloses a conventional card disposal system for managing and discarding used playing cards.

Summary of Invention

Technical Problem

[0004]

Since the conventional card disposal system uses a large-scale card disposal apparatus that confirms on a game table whether or not the number of cards after being used on the game table corresponds to a predetermined number (for example, 52 cards $\times$ 8 decks = 416 cards when 8 decks are used), maintenance of the apparatus is laborious. In addition, cards remaining without being used in the game among the 416 cards also need to pass one by one through the apparatus in order to manage the number of cards, which takes time and effort and hinders an efficient operation of the game. Therefore, it is not appropriate to use the conventional card disposal system in a casino using a large amount of cards.

[0005]

Embodiments of the present invention seek to provide a disposal box for used playing cards capable of easily and certainly discarding the used playing cards in a package unit without the used playing cards being illegally taken out by managing the used playing cards in a package unit including a predetermined number of playing cards (for example, 52 cards $\times$ 8 decks = 416 cards when 8 decks are used) used in a game.

Solution to Problem

[0005a]

An aspect of the present invention provides a disposal box for used playing cards for accommodating and discarding used playing cards to be discarded, comprising:

a slit for inserting the used playing cards into the disposal box,

wherein the disposal box is formed of a paper or plastic material, and is discarded together with the used playing cards in a state in which the used playing cards, which are in an unscrapped state, are contained in the disposal box,

wherein by covering the slit with a slit cover or seal, it makes it difficult to remove the used playing cards contained in the disposal box in the unscrapped state,

wherein the disposal box is composed of six integrated surfaces.

[0006]

A disposal box for used playing cards according to the present disclosure is a disposal box for used playing cards having a cuboid shape provided with six surfaces, namely, front and back surfaces, left and right surfaces, and upper and lower surfaces in an assembled state, and includes a slit that is provided in at least one of the six surfaces of the disposal box and enables the used playing cards to be inserted into the disposal box, viewing windows that are provided in at least one of the front surface, the back surface,

the left surface and the right surface of the disposal box in order to confirm an amount or a content of used playing cards contained in the disposal box, and a viewing hole that is provided in the upper surface of the disposal box in order to confirm existence of the used playing cards contained in the disposal box, wherein the viewing windows are provided as a plurality of holes having a size at which the playing card cannot be taken out, and can allow the used playing cards contained in the disposal box to be visually recognized. The disposal box is formed of a paper or plastic material, and can be discarded in a state in which the used playing cards are contained in the disposal box.

Advantageous Effects of Invention

[0007]

According to the present disclosure, it is possible to easily and certainly discard used playing cards in a package unit without the used playing cards being illegally taken out, which may lead to reduction in operation cost, and improvement of safety as well as improvement of workability of a game in a casino.

Brief Description of Drawings

[0008]

Description of Embodiments

[0009]

A first embodiment of the present invention will be described with reference to the drawings. Fig. 1 is a perspective view of a disposal box for used playing cards according to a first embodiment of the present invention. Fig. 2 is a front view of the disposal box according to the first embodiment of the present invention in a state in which a slit cover of the disposal box is opened, and Fig. 3 is a front view of the disposal box according to the first embodiment of the present invention in a state in which the slit cover of the disposal box is closed. In addition, Figs. 4 to 8 are, respectively, a right side view, a plan view, a bottom view, a left side view, and a development view of the disposal box according to the first embodiment of the present invention, and Fig. 9 is a right side view of the disposal box in a state in which used playing cards are accommodated.

[0010]

A disposal box 2 for used playing cards has a cuboid shape provided with six surfaces, namely, a front surface 3, a back

surface (rear surface) 4, a left surface 5, a right surface 6, an upper surface 7, and a lower surface (bottom surface) 8 in an assembled state. As illustrated in the development view of Fig. 8, the disposal box 2 is composed of a single sheet of material as a whole, and is three-dimensionally assembled as illustrated in Fig. 1 by adhering margin portions to each other. The disposal box 2 is formed of a paper or plastic material. The upper surface 7 and the bottom surface 8 of the disposal box 2 are designed to be slightly larger than the playing cards to be accommodated in the disposal box, and the used playing cards are stacked in a vertical direction to be horizontal to the upper surface 7 and the bottom surface 8 and are accommodated in the disposal box 2.

[0011]

A slit 9 that enables the used playing cards to be inserted into the disposal box 2 is provided in at least one of the six surfaces of the disposal box 2. In the present embodiment, the slit 9 is provided in an upper part of the front surface 3. The disposal box 2 is further provided with a slit cover 12 covering the slit 9. In addition, a plurality of viewing windows 10 for confirming an amount or a content of used playing cards 1a contained in the disposal box are formed in at least one of the front surface 3, the back surface 4, the left surface 5, and the right surface 6 of the disposal box 2. In the present embodiment, the plurality of viewing windows 10 are formed in

the right surface 6. In addition, a viewing hole 11 for confirming existence of the used playing cards 1a contained in the disposal box is formed in the upper surface 7 of the disposal box 2.

[0012]

As illustrated in Fig. 4, each viewing window 10 is formed as a circular hole. Each viewing window 10 is designed to have a size at which the playing cards accommodated in the disposal box 2 cannot be taken out from the disposal box 2. The plurality of viewing windows 10 form lines side by side in a longitudinal direction, that is, a direction in which the used playing cards are stacked in the disposal box 2. A plurality of (two in the present embodiment) these lines are arranged in a transverse direction, that is, a plane direction of each used playing card accommodated in the disposal box, and the viewing windows 10 are alternately provided between adjacent lines, such that each used playing card 1a contained in the disposal box can always be visually recognized from any one of the holes. In addition, the viewing hole 11 is formed at a size at which the playing cards cannot be taken out. Guide indications 14 that indicate the number of used playing cards contained in the disposal box are attached to the right surface 6 in which the viewing windows 10 are provided.

[0013]

The disposal box 2 includes the slit cover 12 for sealing

the slit 9 after a predetermined number of used playing cards 1a are inserted into the disposal box. The slit cover 12 is provided with a barcode 13 representing an identification code (ID code) different for each disposal box 2. A predetermined number of playing cards 1 are packaged. The playing cards 1 of each package are shuffled, and a card arrangement of the playing cards 1 in each package is unique for each package.

[0014]

The ID code is given in a format of a barcode to each package in order to specify the corresponding package. The used playing cards 1a used in a game are inserted into the same disposal box 2 in a package unit. A unique ID code associated with the ID code attached to the package is given in the format of the barcode 13 to the disposal box 2. It should be noted that the ID code may be given to the package or the disposal box 2 by printing a content thereof as it is (rather than the format of the barcode).

[0015]

Next, a method of inserting the used playing cards 1a into the disposal box 2 to discard the used playing cards 1a will be described with reference to Figs. 10 and 11. Fig. 10 is an explanatory view illustrating a state in which the used playing cards are discarded in the disposal box according to the first embodiment of the present utility model, and Fig. 11 is an explanatory view illustrating a state in which the disposal

box according to the first embodiment of the present invention is provided in a game table. As illustrated in Fig. 11, a disposal box accommodation hole for burying the disposal box 2 is formed in a table 16, and the disposal box 2 is fitted into and used in the disposal box accommodation hole in a state in which the slit cover 12 is opened. The disposal box accommodation hole has a depth at which the slit 9 formed in the upper part of the front surface 3 is positioned at the same height as that of an upper surface of the table 16 or is positioned at a position slightly higher than the upper surface of the table 16 as illustrated in Fig. 11 when the disposal box 2 is fitted into the disposal box accommodation hole. Therefore, when the disposal box 2 is fitted into the disposal box accommodation hole formed in the table 16, the slit 9 is positioned at the same height as that of the upper surface of the table surface 16 or is positioned at the position slightly higher than that of the upper surface of the table 16.

[0016]

As illustrated in Fig. 10, after a predetermined number of playing cards 1 (for example, $52 \text{ cards} \times 8 \text{ decks} = 416 \text{ cards}$ when 8 decks are used) managed in a package unit are received in a shooter 15 used in a casino or the like, the predetermined number of playing cards 1 are distributed to a player (customer) on the game table 16 by a dealer and are used in a game.

[0017]

The used playing cards 1a used in the game are brought to the disposal box 2 installed in the game table 16 by the dealer, and are inserted into the disposal box 2 through the slit 9. The dealer can visually recognize the stacked uppermost used playing card 1a by looking into the inside of the disposal box 2 from the viewing hole 11 in a state in which the disposal box 2 is fitted into the disposal box accommodation hole of the table 16, such that the dealer can confirm that the used playing cards 1a are accommodated in the disposal box 2 and an approximate amount of the used playing cards 1a accommodated in the disposal box 2.

[0018]

When both of the used playing cards 1a and the remaining playing cards 1b that are not used in the game are thrown into the disposal box 2 through the slit 9, the dealer pulls up the disposal box 2 from the game table 16. Then, as shown in Fig. 3, the slit cover 12 is closed to cover the slit 9, thereby preventing the used playing cards 1a from coming out from the slit 9. The dealer further sticks a void seal or the like, for stopping the slit cover 12 using a seal sticking position guide 17. Then, the disposal box 2 accommodating the used playing cards 1a is taken into and discarded in a disposal facility 18 in the casino.

[0019]

When the used playing cards 1a are discarded, the used

playing cards 1a contained in each disposal box 2 are discarded. As described above, since the disposal box 2 is formed of the paper or plastic material, the disposal box 2 can be cut by a general cutting machine, and can be incinerated as it is as combustible waste. That is, the disposal box 2 according to the present embodiment is a disposable disposal box. In addition, at the time of discarding the disposal box, it is possible to read the ID code attached to the disposal box 2 and associate the read ID code with an ID of an associated package to leave a record indicating that the disposal box was discarded. In addition, since the disposal box is sealed in a package unit and is managed by the ID code, when there is a case that any disposal box 2 has been lost and not discarded, such a case can be found.

[0020]

In addition, in the above embodiment, the slit 9 is provided in the front surface 3, but the slit 9 may be provided in the other surface. Further, in the above embodiment, the viewing holes 10 are provided in the right surface, but the viewing holes 10 may be provided in any one of the front surface 3, the back surface 4, and the left surface 5.

[0021]

Fig. 12 is a perspective view of a disposal box according to a second embodiment of the present invention. In addition, Fig. 13 is a front view of the disposal box according to the

second embodiment of the present invention, and illustrates a state in which a slit cover 12a is opened. Figs. 14 to 18 are, respectively, a right side view, a plan view, a bottom view, a left side view, and a development view of the disposal box according to the second embodiment of the present invention. In a disposal box 2a of Figs. 12 to 18, the same components as those of the disposal box 2 according to the first embodiment are denoted by the same reference numerals, and a description thereof is omitted.

[0022]

The disposal box 2a according to the second embodiment of the present invention is different from the disposal box 2 according to the first embodiment in that the slit cover 12a has a structure in which it covers both of a slit 9 and viewing windows 10. That is, as illustrated in Figs. 12, 13, and 18, the slit cover 12 has a sufficient width, such that the slit cover 12 can cover a front surface 3 in which the slit 9 is provided and a right surface in which a plurality of viewing holes 10 are provided.

[0023]

The disposal box 2a is fitted into a disposal box accommodation hole of a table 16 in a state in which the slit cover 12a is opened. When a predetermined number of used playing cards 1a are accommodated in the disposal box, a dealer takes the disposal box 2a out of the disposal box accommodation hole

of the table 16, and covers the front surface 3 and the right surface 6 by the slit cover 12a. As in the first embodiment, after the slit cover 12a is closed in this way, a void seal or the like, for stopping the slit cover 12 may further be stuck. [0024]

Fig. 19 is a development view of a disposal box according to a third embodiment of the present invention. In Fig. 19, the same components as those of the disposal box 2 according to the first embodiment are denoted by the same reference numerals, and a description thereof is omitted. The disposal box 2b according to the present embodiment has a structure in which a slit cover 12 does not exist. In the present embodiment, after a predetermined number of used playing cards 1a are accommodated in the disposal box 2, a seal for sealing the slit 9 is stuck so as to close the slit 9.

Industrial Applicability

[0025]

The disposal box for used playing cards used in the table game according to the present invention can easily and certainly discard the used playing cards in a package unit without the used playing cards being illegally taken out, which leads to reduction in operation cost, and improvement of safety as well as improvement of workability of the game. Therefore, the disposal box for used playing cards is useful for a table game

in casino or the like.

CLAIMS

1. A disposal box for used playing cards for accommodating and discarding used playing cards to be discarded, comprising:
a slit for inserting the used playing cards into the disposal box,

wherein the disposal box is formed of a paper or plastic material, and is discarded together with the used playing cards in a state in which the used playing cards, which are in an unscrapped state, are contained in the disposal box,

wherein by covering the slit with a slit cover or seal, it makes it difficult to remove the used playing cards contained in the disposal box in the unscrapped state,

wherein the disposal box is composed of six integrated surfaces.

2. The disposal box for used playing cards according to claim 1, wherein the disposal box is installed and used in a game table of playing cards, and

the slit is positioned at the same height as that of an upper surface of the game table or is positioned at a position higher than the upper surface of the game table when the disposal box is installed in the game table.

3. The disposal box for used playing cards according to claim 1 or 2, wherein a viewing window for confirming an amount of used playing cards contained in the disposal box is provided in at least one of a front surface, a back surface, a left surface, and a right surface of the disposal box.

4. The disposal box for used playing cards according to claim 3, wherein a plurality of viewing windows are provided, and each of the plurality of viewing windows has a size at which the used playing cards contained in the disposal box

cannot be taken out.

5. The disposal box for used playing cards according to claim 4, wherein the plurality of viewing windows form lines side by side in a direction in which the used playing cards are stacked in the disposal box, a plurality of lines are arranged in a plane direction of each used playing card accommodated in the disposal box, and the viewing windows of adjacent lines are alternately provided, such that each used playing card contained in the disposal box can always be visually recognized from any one of the viewing windows.

6. The disposal box for used playing cards according to any one of claims 3 to 5, wherein a guide indication indicating the number of used playing cards contained in the disposal box is further attached to the surface in which the viewing window is provided.

7. The disposal box for used playing cards according to any one of claims 1 to 5, wherein a viewing hole for viewing at least one used playing card accommodated in the disposal box is formed on an upper surface of the disposal box.

8. The disposal box for used playing cards according to any one of claims 1 to 7, further comprising the slit cover or the seal for sealing the slit after a predetermined number of used playing cards are inserted into the disposal box.

9. The disposal box for used playing cards according to any one of claims 1 to 8, wherein a printing or a barcode indicating a different ID is given to each set of used playing cards.

10. The disposal box for used playing cards according to

claim 8, including the slit cover, wherein a sticking position of the seal that limits opening and closing of the slit cover after the slit is sealed is clearly marked on the slit cover.
