

NOZZLE HEAD

Abstract

The invention relates to a nozzle head (1) for discharging a suspension which is under pressure and which consists of a fluid and
5 abrasive agent, with at least one nozzle (8) comprising at least one exit opening (20) for the exit of the suspension, wherein the nozzle head (1) comprises at least one first drive device (17'), by way of which the nozzle head can be rotated about a first axis (A1).
