

AIR SHELTER FOR ELECTRICAL EQUIPMENT

Abstract of the Disclosure

5 To completely prevent air from leaking out from a conduit tube, which protects an electrical wire connecting an electrical equipment and a power source, and to easily and reliably electrically connect the electrical equipment and the power source in an air shelter. A pump 5 and a motor 6 are covered with a cover body 7, and an electrical wire 15 that connects an explosion proof connector 14 and a power source is not protected with a flexible
10 conduit tube 17 in the inside of the cover body 7, and protected with the flexible conduit tube 17 only on the outer side of a conduit tube connector 16 arranged on a side wall of a base 3.
