

ABSTRACT

5 A parcel sorting platform (1) is provided. The parcel sorting platform (1) includes a body (10) having a first main surface (21) and a second main surface (22) backing onto the first main surface; a cargo-stacking region (11) disposed in a middle of the first main surface; and a delivery region (3) disposed along an edge of the body (10). A conveying device receives cargo in the cargo-stacking region (11) and moves along the first main surface (21) of the body (10) to the delivery region (3) so that the conveying device delivers a parcel in the delivery region (3). The parcel sorting efficiency is improved.
