

ABSTRACT

5 The application provides a bandwidth allocation method and device. The
method includes that: Discontinuous Reception (DRX) indication information is
determined, the DRX indication information being used for a terminal device to
determine a working bandwidth to be used within a DRX cycle and/or a frequency
point of the working bandwidth; and the DRX indication information is transmitted to
10 the terminal device. According to the bandwidth allocation method of the
embodiments of the application, unnecessary power consumption of the terminal
device may be avoided.
