(54) Title: A RETAINING MODULE FOR THE EARPIECE OF A HEARING AID

(57) Abstract: A retaining module (5) for retaining an ear piece in an ear. The retaining module (5) comprises an annular sleeve (6) having a central aperture (7) adapted for receiving and holding at least a part of the ear-piece. The retaining module (5) further comprises a first retaining member (8) adapted for engaging at least a part of the concha of the ear and having a proximal end (9) connected to said annular member (6) at a first location, and a strut member (10) having a proximal end (11) connected to said annular member (6) at a second location, and a distal end connected (13) to the distal end (12) of said first retaining member (8).
