

A fabrication method of natural antibacterial tableware

Abstract:

The invention discloses a formula and fabrication method of a kind of natural antibacterial tableware. It consists of 40-99 weight percent of Antimicrobial sterilization amino resin, 0.1-8 weight percent of Antibacterial agents, and 0.1-5 percent of Additives. The tableware has a continuing long-term, broad-spectrum, strong bactericidal inhibition for more than 300 kinds of harmful microorganisms, including *Aspergillus flavus*, *Pseudomonas aeruginosa*, *Staphylococcus aureus*, *Escherichia coli*, *Rhodococcus rhodochrous*, *Candida albicans*, the budding big blue bacilli. It also functions as self-cleaning.
