

METHOD AND APPARATUS FOR PROVIDING SYSTEM INFORMATION

ABSTRACT OF THE DISCLOSURE

Provided are a method for broadcasting system information, in a wireless communication system, by a distributed unit (DU) of a base station and an apparatus for supporting the method. The method may comprise the steps of: receiving, from a central unit (CU) of a base station, system information owned by the CU of the base station; receiving, from a terminal, a request for the system information; receiving, from the CU of the base station, a message commanding broadcasting of the system information; and broadcasting the requested system information.
