

ABSTRACT

The present invention provides a resin composition which contains a copolymer that has less odor and comprises a styrene monomer unit and a (meth)acrylate ester monomer unit, and which has excellent safety, productivity and injection moldability for cosmetic and food packaging applications, while forming a molded article that has excellent hue and light resistance. The present invention provides a resin composition which contains a copolymer that comprises a styrene monomer unit and a (meth)acrylate ester monomer unit, and which is characterized in that: the sum of the contents of unreacted monomers is 2,000 ppm by mass or less; the sulfur content is more than 0 ppm by mass but not more than 150 ppm by mass; and the degree of yellowing of an injection molded plate of 2 mm t is 0.6 or less.
