(54) **Title:** AUTOMATIC DATA ENTRY FOR FORM DATA STRUCTURES USING APPLICATION PROGRAMMING INTERFACES

FIG. 3

(57) **Abstract:** There are provided systems and methods for automatic data entry for form data structures using application programming interfaces. An entity, such as company or business, may want to onboard with a service provider that provides services to the entity, such as those associated with business credit, expense management, and the like. When onboarding, data entry to one or more digital form fields and structures may be required. In order to automate form filling based on data from disparate sources, the service provider may provide an external application programming interface (API) that receives API calls and converts and/or formats data for the fields and data structures of the digital form. The data entered to the fields and/or corresponding data structure may be stored in a specific database and tables as data structures retrievable for the digital form. When a referral token is received, the data may be retrieved.
