TEXT OF THE ABSTRACT

METHOD OF IDENTIFYING PERIPHERAL DEVICE EMPLOYED IN A SEMICONDUCTOR DEVICE

Control programs for a peripheral device (10) to be installed, an identification program for identifying specifications of the peripheral device (10) and a program for selecting the corresponding control program according to their identification are prepared and executed. Since it is unnecessary to manage the corresponding control program stored in a semiconductor device, the fabrication of the semiconductor device is thus prevented from increasing in complexity.
