

ABSTRACT

In order to provide a load control apparatus and a load control system capable of
5 more efficiently using power generated from a private power generator, a load control
apparatus includes a memory, a selector, and a load controller. The memory is
configured to store a plurality of patterns having a plurality of control operations that are
prioritized for a plurality of loads operated by consuming electric power. The selector
is configured to select one of the patterns stored in the memory. The load controller is
10 configured to operate the loads in order of priority on the basis of the control operation of
the selected pattern while a total sum of power consumed by the loads does not exceed a
target power value representing a value based on power suppliable by the electric
generator.
