

DIRECTION CONTROL DEVICE, DIRECTION CONTROL METHOD
AND RECORDING MEDIUM

Abstract

5 A direction control device includes camera means for acquiring an
image captured by photographing a subject by a camera targeted for
adjustment of a photographing direction; image-processing means for
calculating a position of a first setting image that represents the subject in
the captured image; posture detection means for detecting a difference
10 between a position of a second setting image that represents the subject in
a reference image registered in advance and the position of the first setting
image; and camera control means for shifting the photographing direction
of the camera based on the difference.
