

ABSTRACT (FIG. 1)

"ELEVATOR WITH INTER-FLOOR ADJUSTMENT FUNCTION"

According to one embodiment, an elevator with an
inter-floor adjustment function including an elevator
5 controller (10) and an inter-floor adjustment
controller (20). The elevator controller (10) urges
the car frame (1) to run to nearest floors when
abnormal conditions occur. The inter-floor adjustment
controller (20) comprises a completion possibility
10 determining module configured to determine whether an
inter-floor adjustment operation of the car frame (1)
is completed within a preset first period when the car
frame (1) is urged to run to the nearest floors by the
elevator controller, and stops the inter-floor
15 adjustment operation of the car frame (1) if it is
determined that the inter-floor adjustment operation of
the car frame (1) is completed within the first period.
