

PROCESSING SYSTEM

ABSTRACT

5 A processing system includes: a processing apparatus configured to perform an additive
processing on a plurality of objects; and a control apparatus configured to control the processing
apparatus, the control apparatus generates, based on a result of a first measurement operation for
measuring a shape of a first object of the plurality of objects, first processing control information
for controlling the processing apparatus to perform the additive processing on the first object, the
10 processing apparatus performs, based on the first processing control information, the additive
processing on the first object and the additive processing on a second object of the plurality of
objects that is different from the first object.
