(54) Title: SYSTEMS AND METHODS FOR PEER-TO-PEER IDENTITY VERIFICATION

FIG. 1

(57) Abstract: An identity verification system may include a contactless card comprising a processor and a memory, and one or more applications comprising instructions for execution on one or more devices. The contactless card may be associated with a first user. A first application may be configured to transmit, after entry of the contactless card into a communication field, identity data. A second application may be configured to receive a notification based on an identity verification process. The notification may comprise an option indicative of requested access to specified information about the first user, the option further including a choice to accept or decline access to the specified information about the first user. The first application may be configured to receive the requested access to specified information about the first user based on selection of the option.
